Krudex — Company Overview

Nov 7, 2026 · @Sri Likhin Manne

What is Krudex

Krudex Global is an incorporated engineering firm registered in Hyderabad, Telangana, India, that builds SaaS products, runs Google Ads and digital marketing, and trains students with industry experts.

The company works where software engineering, artificial intelligence, digital design and digital marketing meet, and treats them as one craft rather than separate silos. Its student training is offered in collaboration with NovaSkill Hub.

Vision: to be the technology partner that businesses and the next generation of builders trust to turn ideas into products that scale, from Hyderabad to the world.

Mission: to engineer dependable software, take it to market with growth you can measure, and train students in the skills the industry needs today.

What we do

Krudex offers three ways to work with it: building SaaS products, growing businesses through Google Ads and digital marketing, and training students. The product and marketing work is delivered through five disciplines.

Service	What it covers	Stated outcome
SaaS & Web Platforms	Multi-tenant SaaS, dashboards, portals and internal tools on Next.js, Node.js or FastAPI, PostgreSQL and Redis, deployed to AWS or Vercel	Sub-1s Largest Contentful Paint on every project
Mobile Applications	iOS and Android apps from one React Native (Expo) codebase, with offline sync, push notifications and store submission	One codebase, native feel on both platforms

Service	What it covers	Stated outcome
AI & ML Integration	LLM features, RAG knowledge bases, computer vision and custom models (TensorFlow, PyTorch, OpenAI, LangChain)	18ms average inference latency; 94.7% accuracy on vision projects
UI/UX & Brand Design	User research, Figma prototypes, design systems, brand identity, pitch decks and event campaigns	40+ brand identities delivered
Google Ads & Digital Marketing	Google Ads and Meta campaigns, SEO, social, content, landing pages, email and GA4 reporting	One team from product build to customer acquisition

How an engagement runs

1. **Discover:** a free 30-minute scoping call on goals, users and constraints.
2. **Design:** a technical audit, then an architecture document and statement of work agreed before any code is written.
3. **Build:** the engineers who scoped the product build it, with weekly demos, testing and documentation.
4. **Scale:** deployment, monitoring and a 30-day warranty, then marketing and an optional retainer.

Student training

In collaboration with NovaSkill Hub, Krudex trains students in AI & Machine Learning, Java Full Stack and Python Full Stack. Courses are taught by industry experts and finish with a real, deployed project.

Who we are

Krudex is a Hyderabad-based team of seven that puts senior engineers on every project: the people who scope a product are the people who build it.

Name	Role	Focus
Kushwant Kumar Reddy	Founder & Principal Engineer	Leads every client engagement end to end; full-stack web, computer vision, ML systems
Sri Likhin Prasad	Co-Founder	Scalable architecture, performance and reliability; DevOps and scaling
Abhinay Reddy	Chief Technology Officer	Technical direction, architecture and engineering standards
Anil	Marketing Lead	Positioning, campaigns and brand presence
Allu Nanda Kishore	Digital Marketing Head	Google Ads, SEO, social and content for Krudex and its clients
Karing Raghawendhra	Lead AI/ML Engineer	LLM integrations, custom models and MLOps
Siddharth Naidu	Training Team Lead (Students)	Student programs with NovaSkill Hub, curriculum and mentoring

Principles

- **Architecture first:** every project starts with a technical specification both sides agree on, so scope is clear before work begins.
- **Senior-led delivery:** client work is not handed to junior staff.
- **Measurable outcomes:** every engagement has defined success criteria such as Lighthouse scores, latency budgets and accuracy thresholds.
- **Production quality:** typed codebases, documented APIs, test coverage and monitoring from day one.

Commitments to clients

- 100% IP and source code transfer, with no lock-in to proprietary frameworks
- Reply within one business day
- 30-day warranty on every build

Who we serve

Krudex serves three audiences, and works with clients globally, overlapping working hours and using async tools to keep projects moving.

Audience	What they come for
Founders and businesses	SaaS platforms, mobile apps and AI features, from first version to production scale
Businesses that need customers	Google Ads, SEO, social, content and GA4 reporting, measured by leads and revenue
Students	Practical training from industry experts, with NovaSkill Hub

The training page lists four learning areas: SaaS and web development, AI and machine learning, UI/UX design, and Google Ads and digital marketing. Students enquire online, get a reply within one business day, and are then sent the current format, dates and fees.

The company says it takes on a limited number of new client engagements each quarter.

Get in touch

Every inquiry gets a reply within one business day, and new projects start with a free 30-minute scoping call.
